Description (No more than 60 words, use verb phrases and present tense)	Notes (List additional information for the course)
Continued study of the structure and function of the human organism and maintenance of homeostasis. Detailed discussion of anatomical structures and their functions of the cardiovascular, lymphatic, respiratory, urinary, digestive and reproductive organ systems. Topics also include selected disorders for each organ system to illustrate disruption of homeostasis.

Course Proposal Submitted to the COS Curriculum Committee

1. COURSE NUMBER AND TITLE:

BIOL 431 – Advanced Human Anatomy & Physiology II

Course Prerequisites:

BIOL 213, BIOL 430 and 60 credits

Catalog Description:

Continued study of the structure and function of the human organism and maintenance of homeostasis. Detailed discussion of anatomical structures and their functions of the cardiovascular, lymphatic, respiratory, urinary, digestive and reproductive organ systems. Topics also include selected pathology for each organ system; current therapeutic interventions are addressed.

2. COURSE JUSTIFICATION:

Course Objectives:

The course objective is to provide students with a foundation in human anatomy and physiology as preparation for graduate study in health sciences. Students will learn how to relate anatomical structure to function, with emphasis on the coordination of body systems. Students will study selected pathologies and therapies to promote critical thinking and application of learned concepts. Through the utilization of preserved specimens, models, and computer simulations in the laboratory, the students will learn proper anatomical terminology and relation of structure to function.

Course Necessity:

Undergraduate study of human anatomy and physiology is often a prerequisite for application to graduate programs in the health sciences, such as medicine, dentistry, pharmacology, and physical and occupational therapy. Many graduate programs are looking for 8 credits of study in human anatomy and physiology in courses that are more advanced and separate from those courses designed as foundations for nursing and physical education studies (BIOL 124 and BIOL 125). Currently, only BIOL 425, Human Physiology, is offered as a more advanced course in this subject area. This course, however, is not adequate to satisfy graduate level program requirements for multiple reasons: it is only 3 credits, it does not have a laboratory component; there is no emphasis on anatomy. Together, the proposed BIOL 430 and 431 courses will more appropriately satisfy the needs of those students who are pursuing health careers requiring advanced studies.

Course Relationship to Existing Programs:

This course is designed to be an optional biology elective for the B.A. and B.S. Biology degrees, and the B.S. Medical Technology degree.

Course Relationship to Existing Courses:

This course offers a more advanced study in human anatomy and physiology than the BIOL 125 Human Anatomy & Physiology course required for nursing students, and students in the various majors within the School of Recreation, Health and Tourism. This course is designed to satisfy requirements for those students applying to health-related graduate programs.

3. APPROVAL HISTORY:

4. SCHEDULING AND PROPOSED INSTRUCTORS:

Semester of Initial Offering:

Spring 2012

Proposed Instructors

Dr. Brenda Tondi – instructor for BIOL 124, BIOL 125 and BIOL 425

Dr. Sara Kalifa – instructor for BIOL 124, BIOL 125, BIOL 435 and BMED 605

5. TENTATIVE SYLLABUS: see attached

BIOLOGY 431 – ADVANCED HUMAN ANATOMY & PHYSIOLOGY II

FALL 2011

Dr. Brenda Tondi

Office: 3015 David King Hall

Office Hours: Tuesday/Thursday 11:30 am - 1:00 pm; Wednesday 1:00 – 3:00pm; or by appointment

Email: btondi@gmu.edu

Phone: 703-993-9427

COURSE OBJECTIVES:

This is a 4-credit course designed for students who are planning on a career in any health-related field. Physiology integrates information and applies principles that students have learned in biology, chemistry, and physics to understand the function of the human body. Material is organized by organ system and will cover the structure and function of the cardiovascular, lymphatic, respiratory, urinary, digestive and reproductive organ systems. Discussions of selected pathology for each organ system and current therapeutic interventions will also be included. Laboratory emphasis will be on the complementarity of structure and function.

BIOL 431 is the second semester of a two-semester course in Human Anatomy and Physiology. During the second semester we will continue discussion organ systems. Laboratory exercises are designed to reinforce lecture material by providing opportunities for both observation and manipulation of anatomical structures and experiments in physiological principles.

Pre-requisites: BIOL 213 - Cell Structure and Function, BIOL 430, and 60 credits

TEXT: Seely, Rod 2011. Seely's Anatomy & Physiology, 9th Edition. McGraw Hill.

LAB MANUAL: Laboratory Manual for Human Anatomy & Physiology, Fetal Pig Version, Terry R. Martin, McGraw Hill, 2010.

Atlas of the Human Body, Frederic H. Martini, Pearson Benjamin Cummings , 2009

EVALUATION:

You will earn one final grade for this course and will be determined by the percent of possible 750 points that you can earn from lecture and laboratory. These 750 points will be earned as follows:

LECTURE

4 Exams @100 points each

400 Points

Lecture Quizzes

100 Points

LABORATORY

250 Points

750 POINTS TOTAL

GRADING SCALE:

97-100% A+

87-89% B+

77-79%C+

60-69% D

93-96% A

83-86% B

70-76%C

Below 60% . . F

90-92% A-

80-82% B-

All exams must be taken at the regularly scheduled time. (If an exam date is cancelled for any unforeseen reason (such as inclement weather), the exam will be given during the next class period).

* On Exam days – **YOU MUST BRING YOUR GMU PHOTO ID.** ID's will be checked when you hand in your test. A **NO CELL PHONE (and other electronics)** policy will be strictly adhered to during exams. You will also be required to obtain a **TESTING NUMBER** from your instructor which will indicate which exam version you will take.

If you arrive late for an exam, and after a student has already finished and turned in their exam, you will **NOT** be permitted to take the exam.

If a student has a valid and documented absence from an exam, a make-up exam will be provided. All make-up exams are in **ESSAY FORMAT** only. You are only given the opportunity to take **ONE** make-up exam over the course of the semester.

All students must take the Final Exam. Note that the Final Exam is held at a different time than class normally meets.

The **Final Exam** will include the following parts:

New material covered after Exam #3	50%
Cumulative section	50%

EXAM FORMAT:

Exams may include multiple choice, true/false, matching, fill in the blank, essay and problem-solving questions. You will need one scantron form (Form No. 882-E) for each exam. Special testing accommodations must be verified through ODS (Office of Disability Services).

LECTURE MATERIALS:

Power Point slide lecture presentations will be available to you on **Blackboard** to assist you in your note taking, but should **NOT** be used as a substitute for attending class.

Use Mason Username and Password to access the system.

Course Tools to be utilized include:

- * Course Content
 - Various folders with general information and organ system lecture material
- * Announcements
 - Periodic notices (Announcements will also be made in class).
- * Calendar
 - Exam dates

HONOR CODE

The Honor Code is an integral part of university life, and will be vigorously adhered to in this course. On the application for admission, students sign a statement agreeing to conform to and uphold the Honor Code. Therefore, students are responsible for understanding the provisions of the Code. If you do not recall the provisions of this Code, you can review them in the GMU University Catalog – Student Rights and Responsibilities/Honor System and Code.

Honor Code: *To promote a stronger sense of mutual responsibility, respect, trust, and fairness among all members of the George Mason University community and with the desire for greater academic and personal achievement, we, the student members of the university community, have set forth this honor code: **Student***

members of the George Mason University community pledge not to cheat, plagiarize, steal, or lie in matters related to academic work.

Student Responsibilities: *Students should request an explanation of any aspect of the professor's policies regarding the Honor Code that they do not fully understand. They also have an obligation not only to follow the code themselves, but also to encourage respect among their fellow students for the provisions of the code. This includes an obligation to report violations by other students to the Honor Committee.*

MASON Alert System: This system serves to provide students with emergency information of various kinds. You may sign up for these alerts at <https://alert.gmu.edu>

BIOLOGY 431
LECTURE and LABORATORY SCHEDULE

WEEK 1	Cardiovascular System LAB: Histological and Gross Anatomy of the Heart and Blood Vessels
WEEK 2	Cardiovascular System LAB: Review of selected blood vessels for identification; ECG and Blood Pressure Measurements
WEEK 3	Blood Cardiovascular Pathology LAB: Diagnostic tools and therapeutic interventions of selected cardiovascular system pathologies; Histological examination of blood; Blood typing
WEEK 4	EXAM #1 Lymphatic System LAB: Histological and Gross Anatomy of the Lymphatic System
WEEK 5	Lymphatic System Immunology LAB: Lymphatic System Pathology; Diagnostic tools and therapeutic interventions of selected lymphatic system pathologies
WEEK 6	Respiratory System LAB: Histological and Gross Anatomy of the Respiratory System
WEEK 7	Respiratory System Respiratory Pathology LAB: Lung volume measurements; Diagnostic tools and therapeutic interventions of selected respiratory system pathologies
WEEK 8	EXAM #2 Urinary System LAB: Histological and Gross Anatomy of the Urinary System
WEEK 9	Urinary System LAB: Urinalysis; Urinary System Pathology; Diagnostic tools and therapeutic interventions of selected urinary system pathologies
WEEK 10	Digestive System LAB: Gross Anatomy of the Digestive System
WEEK 11	Digestive System LAB: Histological Anatomy of the Digestive System
WEEK 12	Digestive System Pathology; Diagnostic tools and therapeutic interventions of selected urinary system pathologies EXAM #3

LAB: Pig Dissection Review

WEEK 13 Reproductive System

LAB: Histological and Gross Anatomy of Male and Female Reproductive System

WEEK 14 Reproductive System

Male and Female Reproductive System Pathology

LAB: Pig Practical – Evaluation of Organs and their Associated Organ Systems; Diagnostic tools and therapeutic interventions of selected reproductive system pathologies

WEEK 15 FINAL EXAM
